Reward Standards 3.0

Dear DVP community,

Thank you for your continued support and contributions over the past year since DVP was founded. With "Blockchain Security Evolution" global roadshows and hackathons, DVP has entered a new era of development!

According lots of feedback from DVP community with regards to the Reward Standards 2.0, and after thorough investigation by the DVP Foundation, we believe that the Reward Standards 2.0 are no longer suitable and requires immediate upgrade. In order to better guide our community, we have made Reward Standards 3.0, the rules are as follows:

For vendors of Public Blockchain, Token, Exchanges, Wallets and DApp, set "Vendor Level Multiplier" and "Vulnerability Level Multiplier".

"Vendor Level Multiplier": level 1 vendor=1.5, level 2 vendor=1.3, level 3 vendor=1, level 4 vendor=0.9, level 5 vendor=0.1.

"Vulnerability Level Multiplier": severe vulnerability=1.3, high risk vulnerability=1.2, medium risk vulnerability=1, low risk vulnerability=0.8

According to Reward Standards 3.1, the rewards to one vendor's vulnerability = rewards of the standard 2.0 × "Vendor Level Multiplier" × "Vulnerability Level Multiplier"

For example, the Reward Standards 2.0 for level 1 exchange vendor's severe vulnerability is 16 ETH, but according to Reward Standards 3.1, the rewards will be 31.2 ETH.

For vendors of Mining Pools and Threat Information, the rules of Reward Standards 2.0 will still be used in Reward Standards 3.1.

For bounty vendors, please follow rewards rules of the bounties.
